

Identification of molecules associated with tamoxifen resistance

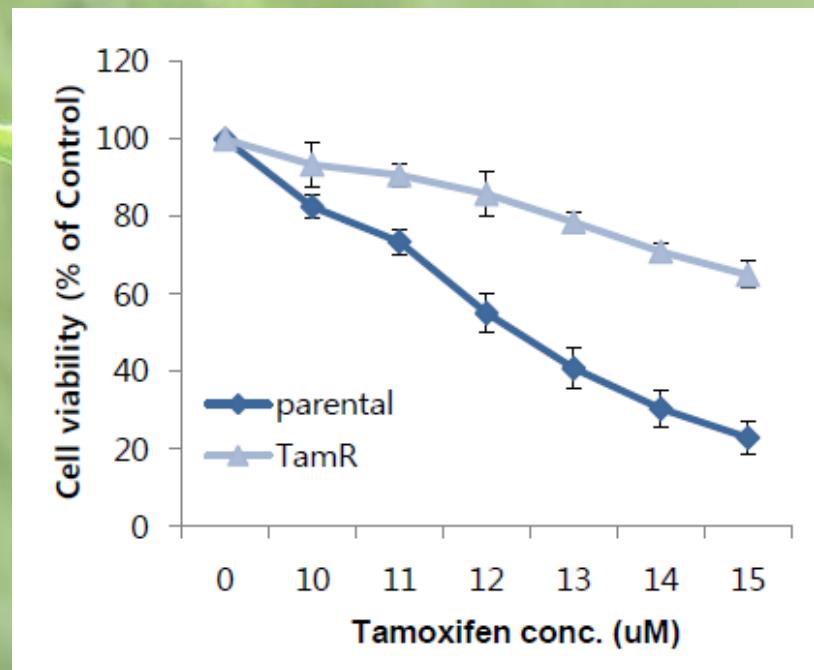

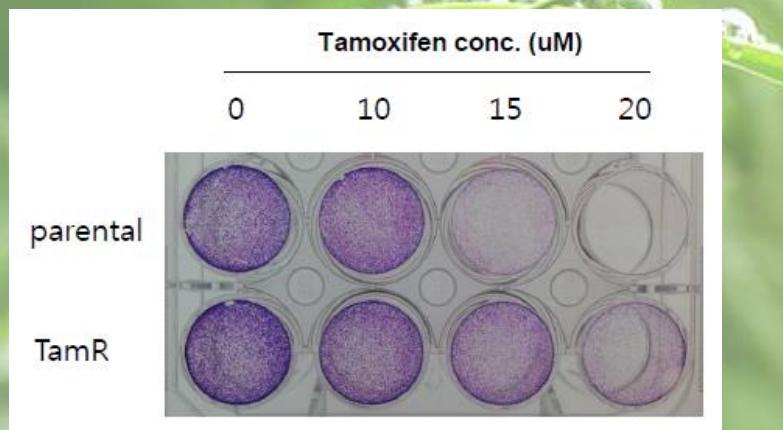

Korea Institute of Radiological & Medical Sciences

Sang Hyeok Woo

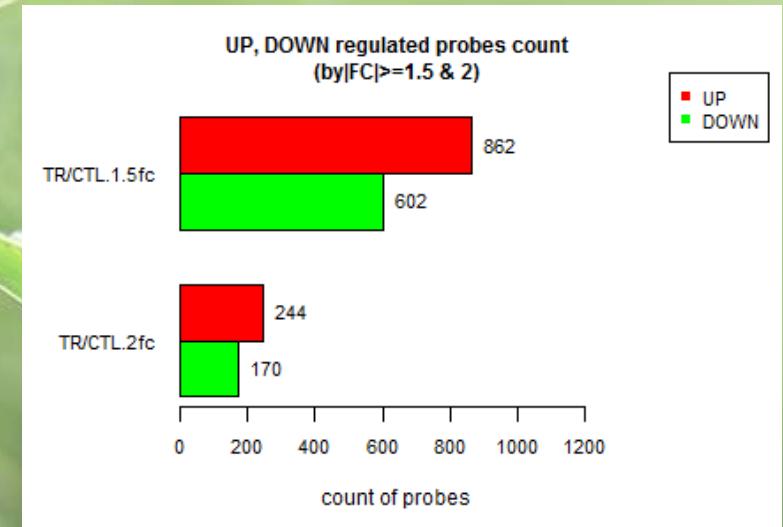

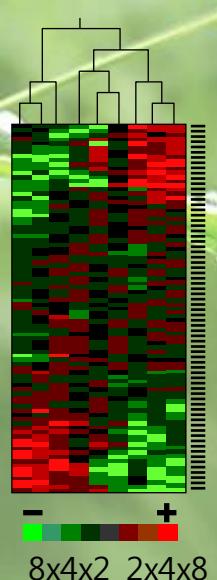

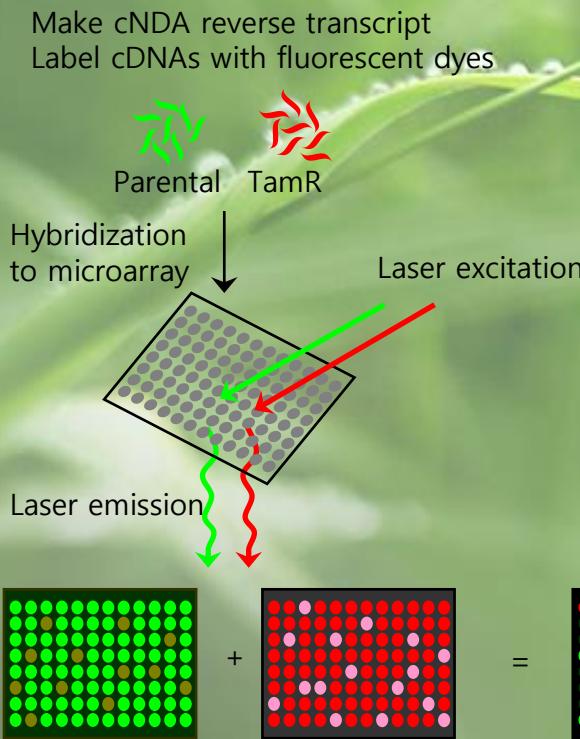

Cross-talk between signal transduction pathways and ER signaling in endocrine-resistant breast cancer

Establishment of TamR cell line

cDNA microarray to screen genes related to tamoxifen resistance

Lyn (Lck/Yes novel tyrosine kinase)

A member of the SRC family of protein tyrosine kinases

Key regulators of several cellular processes, including cancer cell growth, migration, invasion, and survival

Overexpression of LYN is associated with an epithelial-to-mesenchymal transition and correlates with a shorter overall survival in breast cancer.

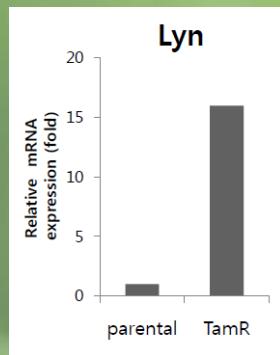

BCR-signaling pathway showing kinase inhibitors.

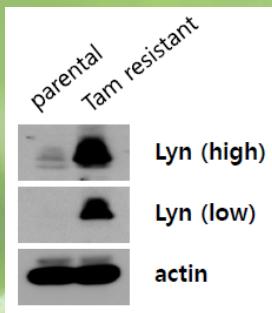

Blood (2015)

Lyn is associated with tamoxifen resistance

F

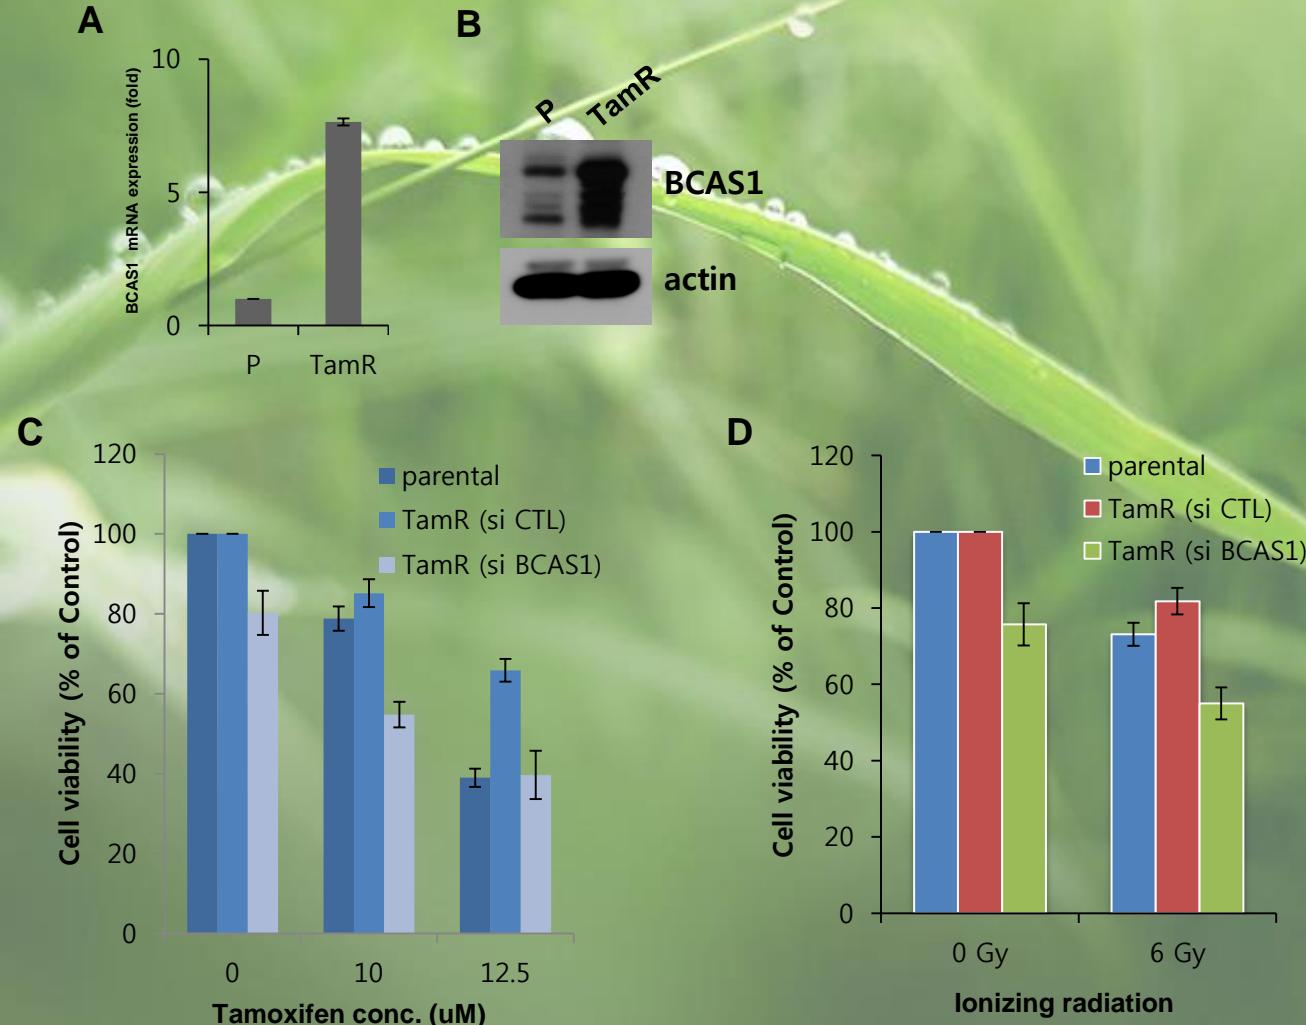

G

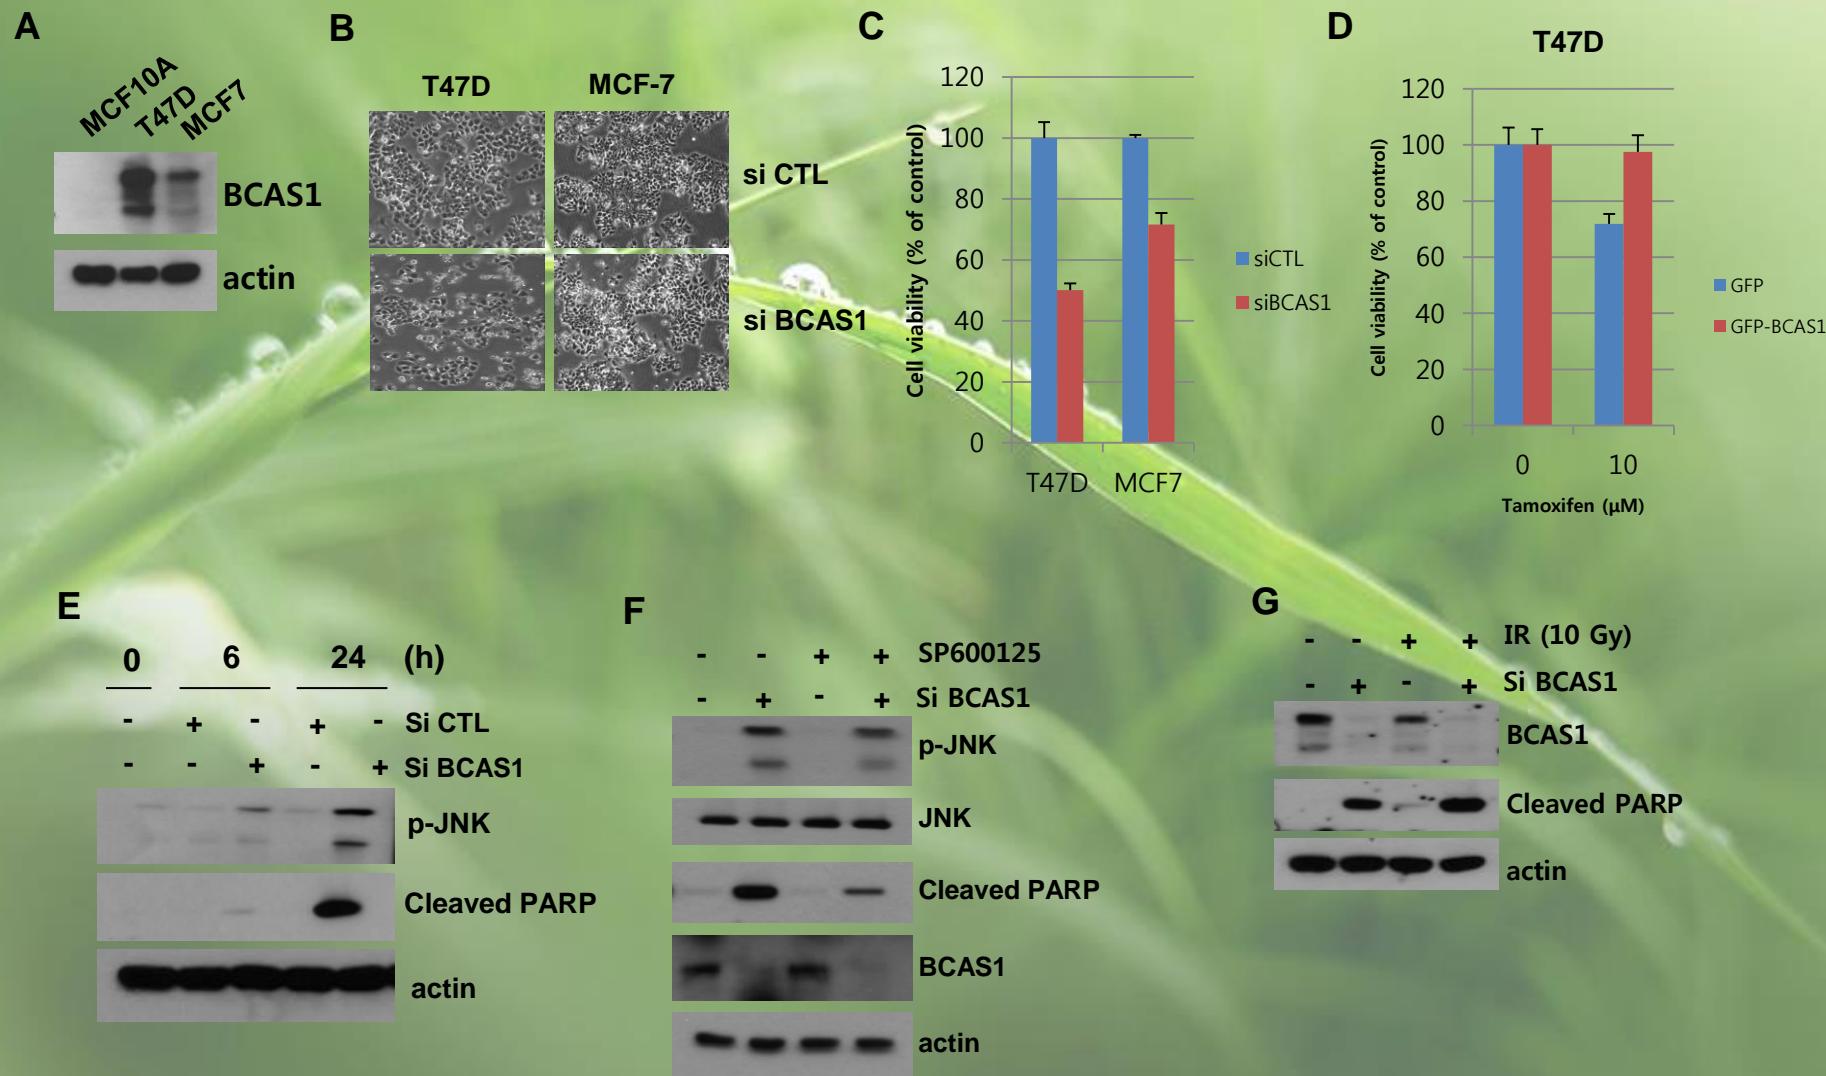

BCAS1 (NABC1)

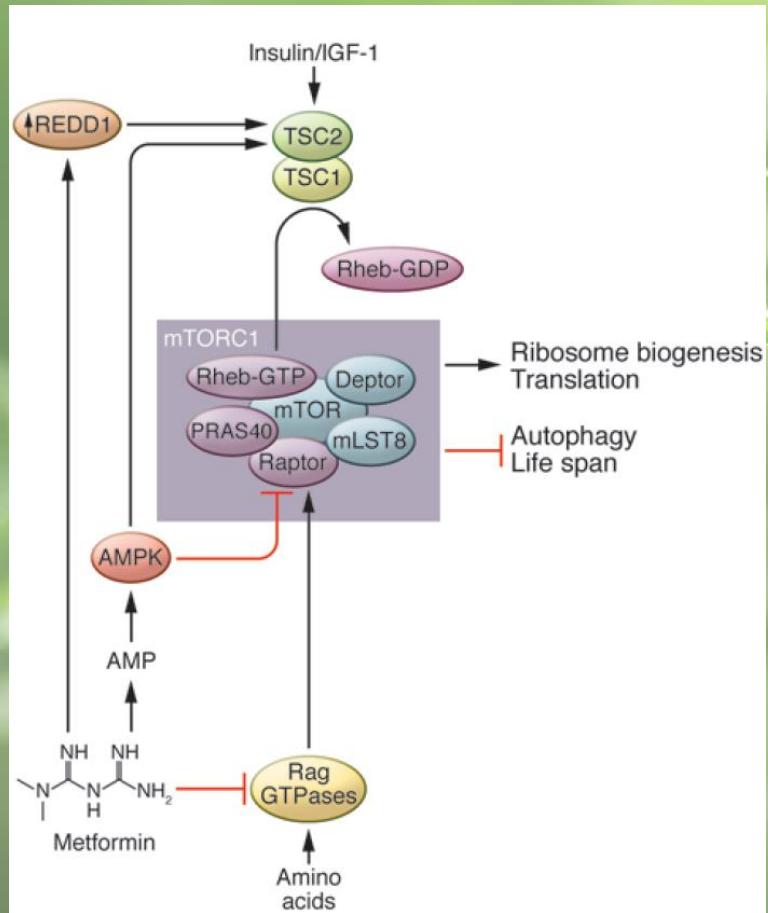

Breast carcinoma-amplified sequence 1 is amplified in a variety of tumor types and associated with more aggressive tumor phenotypes.

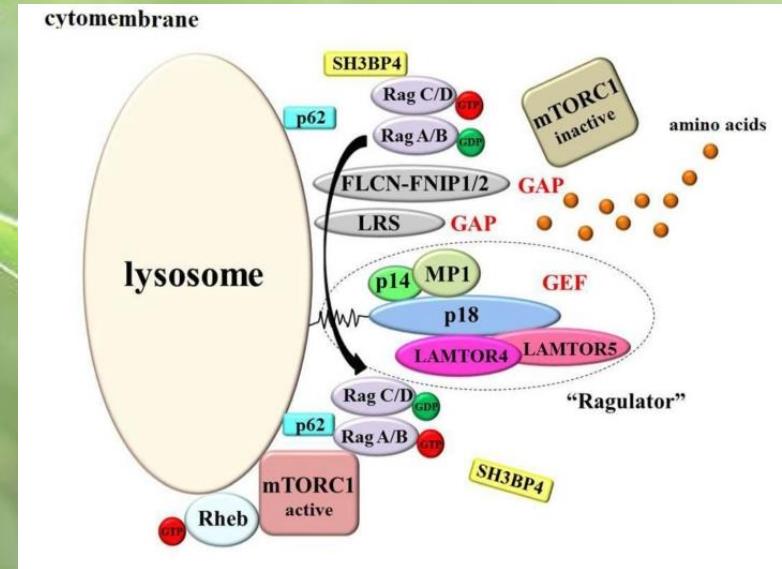

BCAS1 has a protective role in response to tamoxifen of breast cancer cells

mTORC1 regulation by metabolism

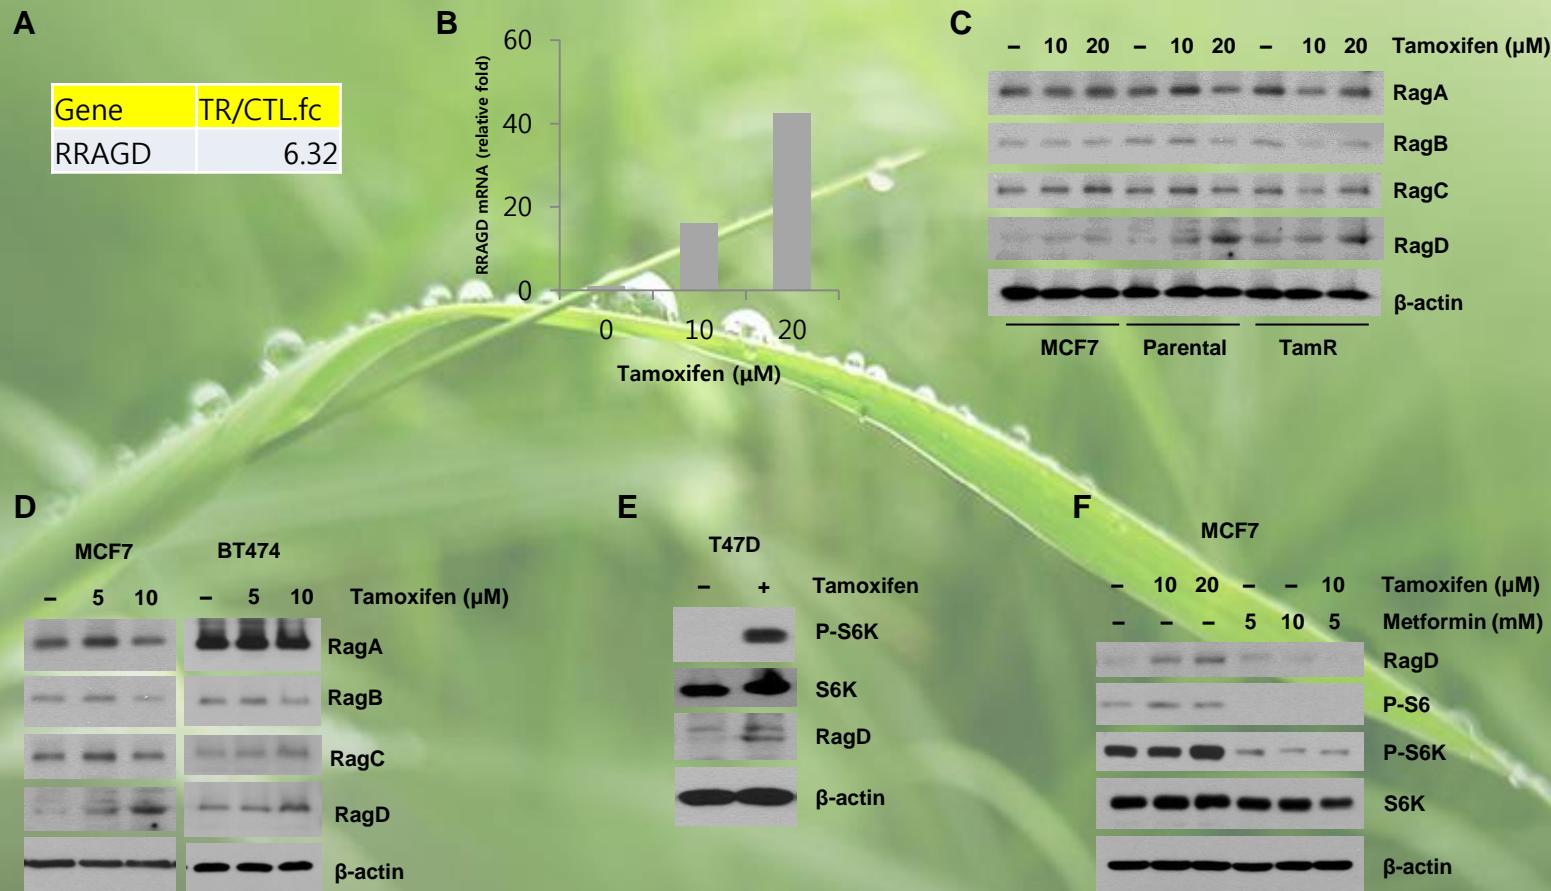

J Clin Invest. (2013)

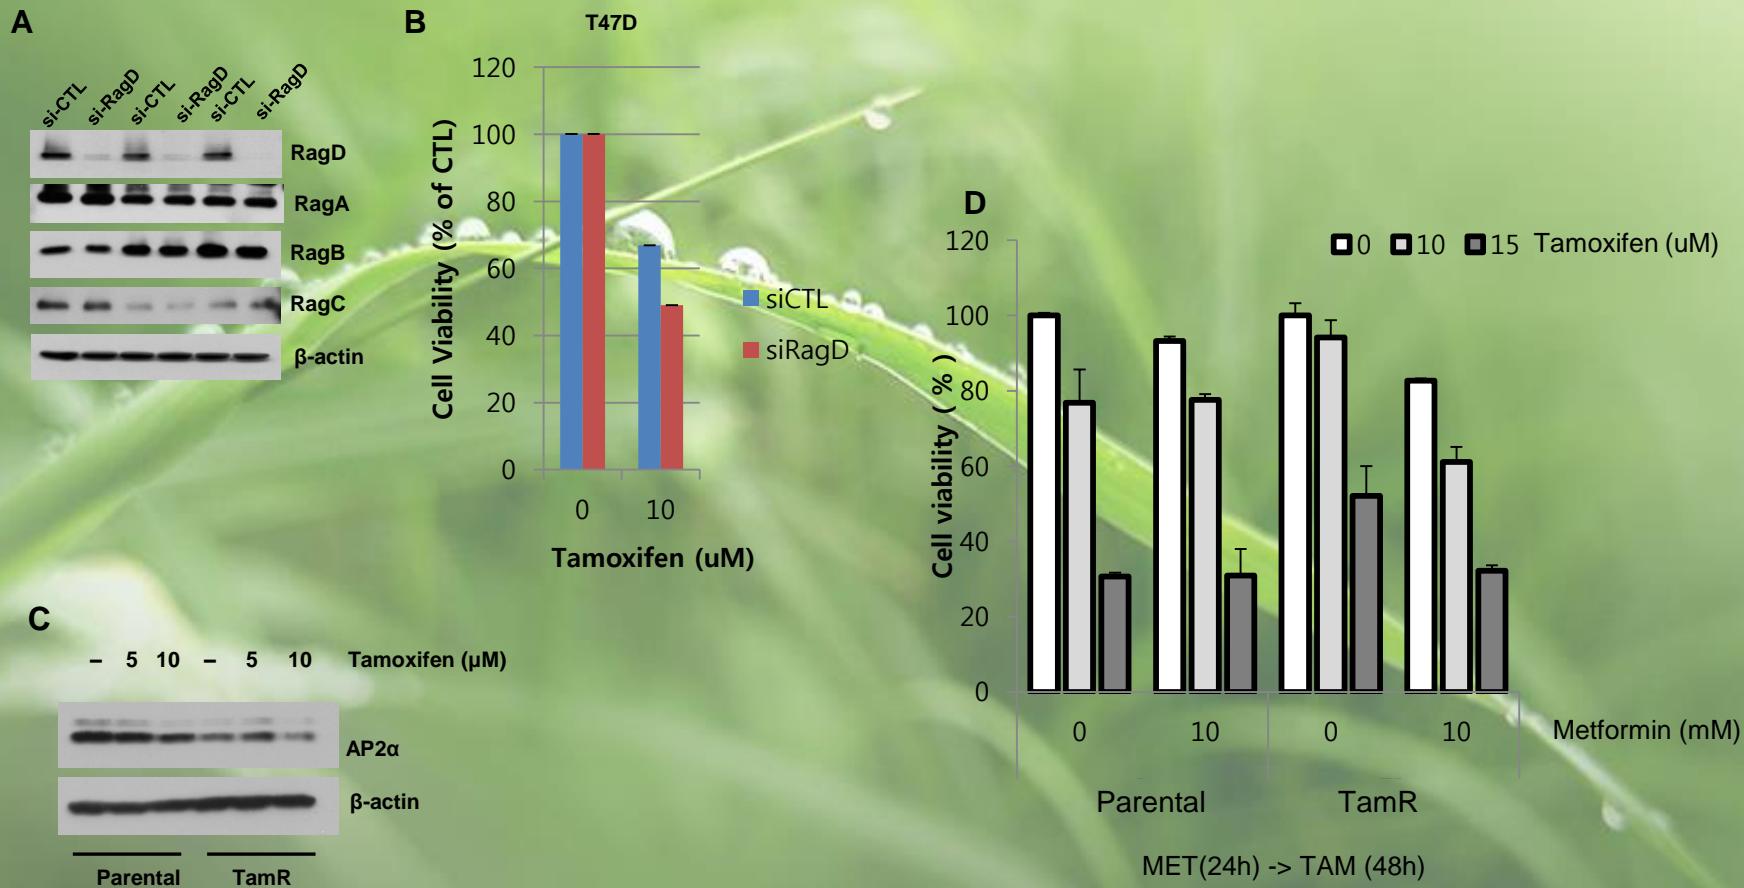

Int J Mol Sci (2014)

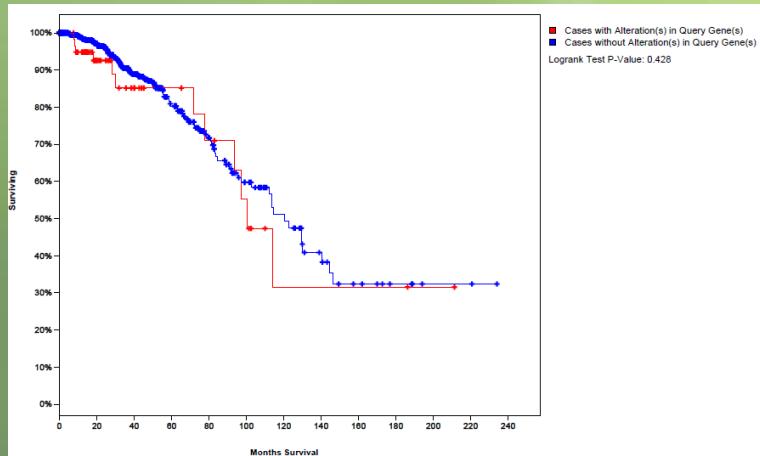

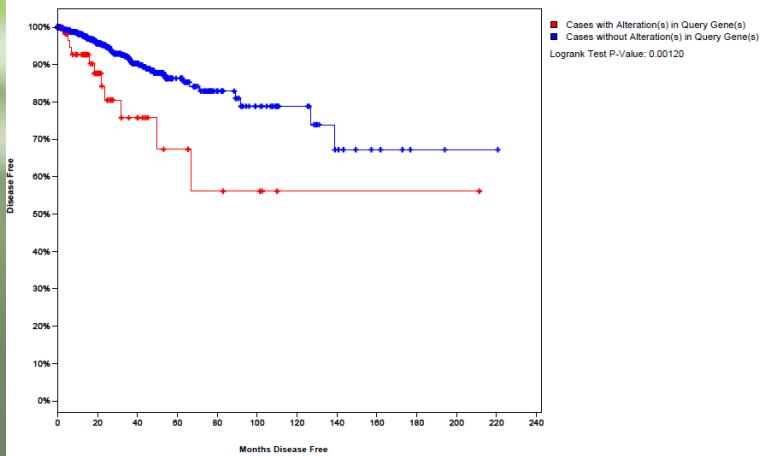

mTOR activation by tamoxifen

RagD is associated with tamoxifen resistance

RagD expression is associated with poor prognosis in breast cancer patients.

**A****B**

GPR81 (G protein-coupled receptor 81)

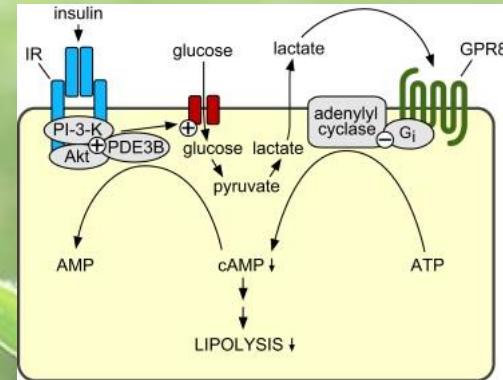

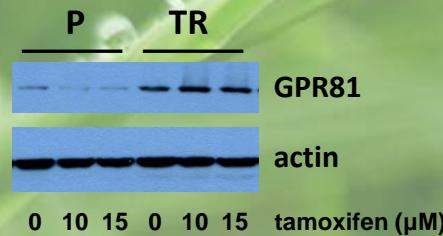

: GPCR for lactate, a key signal in metabolic regulation.

a regulator of lactate transport mechanisms needed for the survival of cancer cells in the tumor microenvironment.

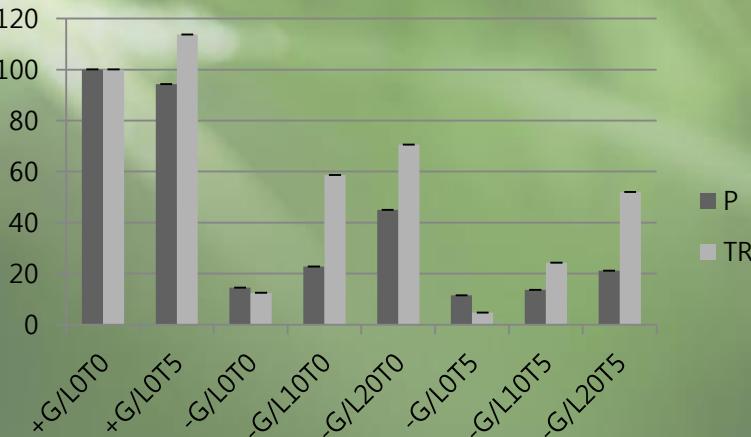

A

RefSeq_NM	GeneSymbol	TR/CTL.fc
NM_032554.2	GPR81	4.47

B

C

P: parental MCF7

TR: Tamoxifen-resistant MCF7

+G: with glucose (4.5 g/L) media

-G: without glucose media

L: lactate 0, 10, 20 mM

T: tamoxifen 5 uM
